SECTION 1

NATIONAL LIST OF PLANT SPECIES
THAT OCCUR IN WETLANDS

REGION 6 - SOUTHERN PLAINS

NATIONAL LIST OF PLANT SPECIES THAT OCCUR IN WETLANDS
REGION 6 - SOUTHERN PLAINS

The following is a subset of the National List of Plant Species That Occur In Wetlands of the southern plains region of the United States. This area includes Oklahoma and Texas.

The list was initiated by the US Fish and Wildlife Service, National Wetland Inventory (NWI). A candidate national list of more than 5000 species was developed and, using information from more than 250 taxonomic references, the NWI assigned a tentative wetland indicator status to many of the species. The indicator status categories, which define the estimated probability of a species occurring in wetlands, are as follows:

<u>Category</u>	<u>Symbol</u>	<u>Definition</u>
OBLIGATE WETLAND PLANTS	OBL	Plants that occur almost always (estimated probability >.99%) in wetlands undernatural conditions.
FACULTATIVE WETLAND PLANTS	FACW	Plants that occur usually (estimated probability >67 to 99%) in wetlands, but also occur (estimated probability 1% to 33%) in nonwetlands.
FACULTATIVE PLANTS	FAC	Plants with a similar likelihood (estimated probability 33% to 67%) of occurring in both wetlands and nonwetlands.
FACULTATIVE UPLAND PLANTS	FACU	Plants that occur sometimes (estimated probability 1% to 33%) in wetlands, but occur more often (estimated probability >67% to 99%) in nonwetlands.
OBLIGATE UPLAND PLANTS	UPL	Plants that occur rarely (estimated probability <1%) in wetlands, but occur almost always (estimated probability ≥99%) in nonwetlands under natural conditions.

For purposes of this manual, any plant species not appearing on the plant list was assumed to be an upland species unless a strong technical rationale could be developed for adding it to the list....

In 1982, the NWI invited other Federal agencies to participate in a review of the NWI plant list. A national review panel was established,

comprised of representatives from the Fish and Wildlife Service, Environmental Protection Agency, Soil Conservation Service, and Corps of Engineers. The national panel developed guidelines for the review process and established regional panels composed of a representative from each agency. The regional panels reviewed the plant list for their region and provided the national review panel with the results. The list that follows represents a subset of the reviewed list for Region 2. Note: Although additional work by the regional panel will be required, the current status of the list is considered to be adequate for use in this manual. The list will be updated as further revisions are made.

Nomenclature used in the list is based on the National List of Scientific Plant Names (USDA-SCS 1982). The generic name is listed only once, and species within a genus are alphabetized.

Symbols

Symbols appearing in the list under the indicator status column are as follows:

- +: A "+" sign following an indicator status denotes that the species generally has a greater estimated probability of occurring in wetlands than species having the general indicator status, but a lesser estimated probability of occurring in wetlands than those having the next highest general indicator. For example, a species with an indicator status of FAC+ occurs in wetlands more often than a species designated as FAC, but less often than a species having a FACW status.
- : A "--" sign following an indicator status (e.g. FACW-) denotes that the species generally has a lesser estimated probability of occurring in wetlands than species having the general indicator status, but a greater estimated probability of occurring in wetlands than those having the next lowest general indicator. For example, a species with an indicator status of FACW- occurs in wetlands less often than a species with a FACW status, but more often than a species having a FAC+ status.
- DRA: This symbol indicates that the species normally occurs at the indicated estimated probability in wetlands, but only during periods when standing water is absent.

??: A "?" indicates that the species was reviewed by the regional panel, but no decision has been made regarding the appropriate indicator status.

-: A dash without an associated indicator status signifies that no review comments were received, usually because the species is rare in the region or its taxonomic status is questioned.

An X prior to the species name in the scientific name column denotes a hybrid. For purposes of this manual, all species appearing on the regional plant list as FAC-, FACU+, FACU, or FACU- have been deleted from the list because they do not contribute toward hydrophytic vegetation.

THIS LIST SHOULD BE USED IN ACCORDANCE WITH INSTRUCTIONS PROVIDED IN PART IV OF THE MANUAL.

**LIST OF PLANT SPECIES THAT COMMONLY
OCCUR IN WETLANDS**

REGION 6 - SOUTHERN PLAINS

Region 6 - Southern Plains

1. Following is a list of plant species that commonly occur as dominant species in wetlands of the southern plains of the United States. This region includes Texas and Oklahoma.

2. The list is a subset of the list provided in Section 1. Only species that commonly occur as dominant species in wetland types of the region are listed. All included species have an indicator status (see Section 1 for definitions of indicator status categories) of OBL, FACW, or FAC.* These species are considered to be typically adapted for life in anaerobic soil conditions. Thus, the vegetation parameter is satisfied when more than 50 percent of the dominant species in a community type appear on this list. In such cases, it is unnecessary to use the list provided in Section 1. However, many other species listed in Section 1 as OBL, FACW, or FAC may be dominant at a given location. Therefore, use the list provided in Section 1 when more than 50 percent of the dominant species in a community type are not included in Section 2. *CAUTION: THIS LIST IS NOT INTENDED TO INCLUDE ALL OF THE SPECIES IN THE REGION THAT ARE TYPICALLY ADAPTED FOR LIFE IN ANAEROBIC SOIL CONDITIONS.*

3. In some cases, only the generic name is listed. When only one indicator status is shown for a genus, all species of the genus that are listed in Section 1 have the designated indicator status. When a range of indicator statuses is shown (e.g., OBL-FAC), the species listed in Section 1 have different indicator statuses. However, it is unnecessary to consult Section 1 when the range consists only of OBL, FACW, and/or FAC since a species having any of these indicator statuses is considered to be typically adapted for life in anaerobic soil conditions. When the indicator status range of the genus includes FAC- or FACU, identify the species and consult Section 1 to determine the indicator status for that species. Species having a "?" in the indicator status column are thought to commonly occur in wetlands of the region, but no indicator status has been assigned to these species.

4. Scientific nomenclature follows that provided in Section 1. Common names sometimes vary from those provided in Section 1 because a species may have two or more common names. The indicator status for a given species is the same on both lists.

* No species having an indicator status of FAC- are included.

THIS LIST SHOULD BE USED ONLY IN ACCORDANCE WITH PROCEDURES DESCRIBED IN
PART IV OF THE MANUAL.
